The figure is a scatter plot titled "Figure 6". The vertical axis (y-axis) is labeled "Number of children per woman at birth" and has major tick marks at 0, 2, 4, 6, and 8. The horizontal axis (x-axis) is labeled "Percentage of women who are employed" and has major tick marks at 0, 20, 40, 60, 80, and 100. There are approximately 15 data points scattered across the plot. Most points are clustered between 20% and 80% employment and 2 to 6 children per woman. Notable outliers include a point near (90%, 7.5) and another near (10%, 7.5). The overall pattern suggests a negative correlation between employment and fertility.
